### HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

### **DETAILED ACTION**

#### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on October 29, 2007 has been entered.

#### ***Reasons for Allowance***

2. The following is an examiner's statement of reasons for allowance: claims are allowable over the prior art, specifically Dickman et al. (US 6,265,118), Okamoto et al. (US 6,045,933) and Wattelet et al. (US 6,824,906).

Claim 1 recites a heat exchange unit for a fuel cell apparatus, the heat exchange unit having a laminated structure and the laminations serving as heat exchangers for eliminating moisture from each of the fuel supplied to the fuel cell, the fuel off-gas discharged from the fuel cell, and the air off-gas discharged from the fuel cell. The heat exchange fluid is water that is also used to cool the fuel cell system.

Dickman et al. teach a heat exchanger using water, but fail to teach the use of the heat exchanger to dehumidify the fuel inlet.

Okamoto et al. teach dehumidification of the fuel entering a fuel cell but fail to teach the use of cooling water from the fuel cell.

Wattelet et al. teach a heat exchanger having a common coolant stream for both cathode exhaust and coolant circulated through the fuel cell but fail to teach the use of the coolant to dehumidify the cathode exhaust, or the anode exhaust and ingoing fuel as well.

The prior art does not teach the heat exchange unit of the instant invention.

Additionally, the Information Disclosure Statement filed October 29, 2007 has been considered by the examiner. Included with the IDS and references was the Notice of reasons for rejection by what is assumed to be the Japanese Patent Office. This document, while not on the IDS, was also considered. While the Japanese examiner who wrote these reasons for rejection believes that the invention is not allowable over the cited references, this examiner disagrees. The closest prior art cited by the Japanese examiner is JP 06-283185, which teaches a similar heat exchanger. This heat exchanger lacks several of the features of the instant invention that make the instant invention allowable over the prior art. For example, the instant heat exchanger is arranged in a different manner, and the limitations to the structure are founding the claim language; specifically, the instant claim 1 contains language pertaining to the various inlets and outlets for the various components going into and leaving the heat exchanger. Additionally, the Japanese examiner has interpreted "laminated" to mean "integral". This examiner does not agree with this interpretation, since it is seen clearly from the drawings in the instant disclosure that laminated is more specific than integral, and clearly defines the structure of the instant heat exchanger over that of the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
